

Product Datasheet

60mm \varnothing Ultracapacitors – threaded type

- Rated voltage 3VDC
- 3400F capacitance
- Low ESR
- High cycle life of 1 million cycles
- Excellent DC life performance
- Threaded terminals M12
- Very high energy and power density

ELECTRICAL SPECIFICATIONS

Type	C60T-3R0-3400
Rated Voltage V_R	3.00 V
Surge Voltage V_S^1	3.10 V
Rated Capacitance C^2	3400 F
Capacitance Tolerance 3	0% / +20%
ESR 2 (DC)	<0.24 m Ω
ESR 2 (AC, 1 kHz)	<0.21 m Ω
Leakage Current I_L^4	<12 mA
Self-discharge Rate 5	<20%
Constant Current ($\Delta T = 15^\circ C$) 6	141 A
Max Current I_{Max}^7	2.8 kA
Short Current I_S^8	12.5 kA
Stored Energy E^9	4.25 Wh
Energy Density E_d^{10}	8.6 Wh/kg
Usable Power Density P_d^{11}	9.1 kW/kg
Matched Impedance Power Density P_{dMax}^{12} , 10 Hz ESR	18.9 kW/kg
Matched Impedance Power Density P_{dMax}^{12} , 1 kHz ESR	21.6 kW/kg

THERMAL CHARACTERISTICS

Type	C60T-3R0-3400
Working Temperature	-40 ~ 65°C
Storage Temperature 13	-40 ~ 70°C
Thermal Resistance R_{Th}^{14}	3.1 K/W
Thermal Capacitance C_{Th}^{15}	570 J/K

LIFETIME CHARACTERISTICS

Type	C60T-3R0-3400
DC Life at High Temperature 16	1500 hours
DC Life at RT 17	10 years
Cycle Life 18	1'000'000 cycles
Shelf Life 19	4 years

SAFETY & ENVIRONMENTAL SPECIFICATIONS

Type	C60T-3R0-3400
Safety	RoHS, REACH and UL810
Vibration	ISO 16750-3 (Table 12)
Shock	IEC 60068-2-27, 100g 6ms

PHYSICAL PARAMETERS

Type	C60T-3R0-3400
Mass M	496 g
Terminals	Threaded ²⁰
Dimensions ²¹ Height L	138 mm
Diameter	60 mm

NOTES:

- Surge voltage V_S : Absolut maximum voltage, non-repetitive. The duration must not exceed 1 second.
- Capacitance C: The test current is 0.075 A/F, if the calculated current is $>100A$, then apply 100A.

- Capacitance tolerance: Typical tolerance is $+5\% \sim +10\%$.
- Leakage current measurement procedure: 1) Charge the capacitor to the V_R with a constant current (0.075 A/F, if the calculated current is $>100A$, then apply 100A). 2) Hold the voltage at V_R for 72h. 3) The current to maintain V_R after 72 h is the leakage current.
- Self-discharge rate measurement procedure: 1) Charge the capacitor to V_R with a constant current (0.075 A/F, if the calculated current $>100A$, then apply 100A). 2) Hold the voltage at V_R for 3h. 3) Floating for 72h. 4) Measure the voltage after 72 h.
- Max constant working current: $I_{MCC} = \sqrt{\Delta T / (ESR * R_{Th})}$
- Max current: $I_{Max} = 0.5C * V_R / (\Delta t + ESR * C)$, discharge from V_R to $V_R/2$ in 1 second.
- Short current: $I_S = V_R / ESR$
- Stored energy: $E = 0.5C * V^2 / 3600$
- Energy density: $E_d = E / M$
- Usable power density: $P_d = (0.12V_R^2 / ESR) / M$
- Matched impedance power density: $P_{dMax} = (0.25V_R^2 / ESR) / M$
- Storage temperature: Storage in discharge state.
- Thermal resistance: $R_{Th} = \Delta T / P$, where $P = ESR * I^2$
- Thermal capacitance is indicated for the whole product.
- DC life at high temperature: Hold the capacitor charged at rated voltage at $65^\circ C$ for 1500h. The capacitance shall be $>80\%$ of the rated value, the ESR shall be $<200\%$ of the rated value.

- DC life at RT: Hold the capacitor charged at rated voltage at room temperature RT, the capacitance shall be $>80\%$ of the rated value, the ESR shall be $<200\%$ of the rated value.
- Cycle life: Charge and discharged the capacitor in the range between V_R and $V_R/2$. 5 seconds waiting period between charge and discharge. The constant test current is 0.075 A/F (if the calculated current $>100A$, then apply 100A).
- Shelf life: Discharged and no load applied at RT.
- The maximum torque for threaded terminal is 12 Nm.
- Dimensions C60T-3R0 3400:

Standard markings:

- + Name of manufacturer, part number, serial number
- + Rated voltage and capacitance, negative and positive terminals, warning marking
- + Stored energy in watt-hours

Mounting recommendations:

- + Mounting without applying undue mechanical stress on the terminals
- + Provide adequate spacing in between cells to secure required insulation strength
- + Provide clearance around the safety vent and do not position anything above the safety vent that may be damaged in an event of vent rupture
